

August 19, 1956

Dear Dr. Tulasne:

I am sorry to note that I have not received any publications from you in some years, and I regret that I may be overlooking some important contributions. As you know, it is especially difficult to keep in touch with the activities of colleagues abroad.

I am writing you now particularly because we are again taking up studies on L-forms, in connection with their relationship to protoplasts, as discussed in a ms. sent under separate cover. If it is convenient, I would be especially grateful to receive the papers from your laboratory (especially on this subject) since about 1950, a favor I am happy to continue to exchange.

Yours sincerely,

Joshua Lederberg  
Professor of Genetics
